Restriction

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 1-16 are drawn to a data transfer circuit classified in class 345, subclass 204.

II. Claims 17-20, 27 and 29, drawn to an output circuit, classified in Class 327, subclass 103.

III. Claims 21-26, 28 and 30, drawn to an input circuit, classified in class 327, subclass 100.

Inventions I, II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations. (M.P.E.P. § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination of Group I does not require the subcombination of Group II. For example, the invention I has separate utility such as a data transfer circuit having an input circuit and an output circuit which have the structures are different from the structures of the output circuit of the Invention II and the input circuit of the Invention III. Thus the invention I does not require the particular circuit of the inventions II and III.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2816

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
